SUMMARY

Software Engineer specializing in architecting and modernizing legacy industrial software into scalable, service-oriented platforms. Proven ability to translate complex engineering workflows into high-performance applications using C#, .NET, C++, and SQL Server. Demonstrated early ownership of critical manufacturing modules, delivering measurable operational improvements including a **27% reduction in material waste**. Strong systems thinker focused on clean architecture, performance optimization, and building resilient production-grade software.

EXPERIENCE

- Windowmaker Software Pvt. Ltd.**
Software Engineer

Vadodara, India
Jul 2023 – Present

 - Owned the architectural modernization of legacy manufacturing software by decomposing monolithic components into modular, UI-independent services (**PlanningService**, **ProcessService**). Defined service boundaries, improved inter-module data flow, and enabled cross-platform reuse across CLI and web environments, strengthening scalability and long-term maintainability.
 - Engineered a production-grade optimization mechanism to virtually splice profile bars into unified assemblies. Re-architected machining workflows to support spliced components, increasing throughput and reducing material waste by **27%**.
 - Designed and delivered vendor-specific integration layers for CNC saws and welding stations by translating internal machining logic into machine-readable instructions, automating high-volume shop-floor processes and minimizing manual intervention.
 - Diagnosed and resolved complex production issues impacting live deployments through deep root-cause analysis. Delivered stable fixes that improved operational reliability and reduced recurring defects across manufacturing workflows.
 - Collaborated cross-functionally with QA, support, and senior engineering teams to deliver production-ready features, accelerate release cycles, and maintain high software quality standards.
- Rapidops Inc.**
Data Science Intern

Ahmedabad, India
Jan 2023 – Jun 2023

 - Developed classification and recommendation models using Python, Scikit-learn, and TensorFlow, applying NLP techniques to extract actionable insights from real-world datasets.
 - Implemented end-to-end machine learning pipelines including data preprocessing, model training, evaluation, and deployment support for client-facing solutions.

KEY IMPACT

- Best Employee – Q2 2024:** Recognized for delivering high-impact engineering contributions within the first year and demonstrating accelerated ownership of business-critical modules.
- Operational Efficiency:** Led manufacturing optimization initiatives that significantly improved machining accuracy and reduced raw material waste by 27%.

TECHNICAL SKILLS

- Languages:** C#, C++, Python, SQL
- Platforms & Frameworks:** .NET / .NET Core, ADO.NET, LINQ, REST APIs, SQL Server
- Architecture:** Service-Oriented Design, Modular Architecture, Legacy System Modernization
- Systems Expertise:** Manufacturing Software, Industrial Automation Integrations, Data Flow Design
- Core Strengths:** Performance Optimization, SOLID Principles, Production Reliability
- Tools:** Visual Studio, SSMS, Git, Azure DevOps, GitHub Copilot, ChatGPT (AI-assisted development, debugging, and code optimization)

EDUCATION

- The Maharaja Sayajirao University of Baroda**
B.E. in Computer Science and Engineering — 76.42%

Vadodara, India
2019 – 2023
- Shree Swaminarayan Gurukul (GSHSEB)**
Higher Secondary Certificate — 92%

Junagadh, India
2018 – 2019
