PROFESSIONAL SUMMARY

Java Backend Developer with a strong foundation in Spring Boot, REST APIs, and secure system design. Experienced in building scalable, backend applications with JWT-based authentication and AI-powered features. Passionate about clean architecture, performance optimization, and reliable backend solutions for real-world problems.

SKILLS

- **Programming Languages :** Java, C++
- **Backend & Frameworks:** Spring Boot, Spring Security, Hibernate, REST APIs, Microservices, Database Optimization, Client-Server Architecture
- **Frontend :** React, HTML, CSS
- **AI and Integration :** LLM API Integration (Groq/OpenAI), Prompt Engineering
- **Tools & Development:** Git, Postman, MySQL, MongoDB, API Testing, Debugging, Docker

EDUCATION

Rajasthan Technical University Bachelor of Technology in Computer Science (CGPA: 8.7)	2022 – 2026 Jaipur, India
---	------------------------------

EXPERIENCE

JAVA Full Stack Intern — Infosys Springboard	Nov 2025 – Jan 2026
---	---------------------

- Built and structured backend services using Spring Boot with JWT-based authentication, contributing to a full-stack health tracking platform with AI-powered features.
- Identified and resolved API integration and data flow issues by debugging request-response cycles and optimizing database queries, improving overall system stability and reducing failure scenarios.

Software Developer Intern — Goklyn Private Limited	June 2025 – August 2025
---	-------------------------

- Engineered REST APIs with JWT-based authentication and RBAC, implementing layered architecture with clean separation of concerns.
- Optimized database queries and indexing for dashboard backend, reducing API response latency and improving request handling efficiency.

PROJECTS

Wellnest Smart Companion — Spring Boot, React — Live Demo

- Built a full-stack health tracking platform with 20+ REST APIs, JWT-based authentication, and role-based access control supporting real-time health tracking across 15+ modules.
- Integrated AI-powered features including chatbot, voice commands, and meal analyzer using LLM APIs, reducing manual logging effort by approximately 40% and improving response reliability using fallback strategies.

Internal Management Dashboard

- Developed 8+ REST APIs with role-based authentication and secure data access, supporting internal dashboard operations aligned with business requirements.
- Improved backend reliability by optimizing database queries and request handling, reducing response latency and ensuring consistent data flow.

CERTIFICATIONS

- Infosys Java Foundation Certificate (2025)
- IBM SkillsBuild - Advanced IT Skills (2025)
