## Career Objective

Full-Stack Developer specializing in TypeScript, React.js, Node.js, and PostgreSQL with hands-on experience building AI-powered SaaS applications. Built and deployed multiple production-ready projects using Prisma, OpenRouter APIs, and modern cloud platforms like Vercel and Render. Strong interest in scalable backend systems, AI integrations, and frontend product engineering.

## Projects

### 🔗 Hunter | AI Job Tracker

🔗 Live Demo

- Built a full-stack AI-powered job tracking platform using React (TypeScript) and Node.js (Express), enabling users to manage applications through a Kanban-style dashboard with real-time status updates.
- Designed and implemented a secure backend with PostgreSQL and Prisma ORM, handling authentication (JWT), role-based access, and relational data modeling for users, jobs, resumes, and analytics.
- Implemented automated email reminder system using Nodemailer and cron jobs to notify users of stale applications, improving engagement and follow-up efficiency.

**Tech Stack:** React (TypeScript), Tailwind CSS, Node.js, Express.js, PostgreSQL, Prisma, OpenRouter API, Cloudinary, Nodemailer, REST APIs, Render, Neon, Vercel

### 🔗 Expense Tracker | Personal Finance Management Platform

🔗 Live Demo

- Built a full-stack expense tracking application using React, Node.js, Express.js, and MongoDB, enabling users to manage, categorize, and monitor daily expenses through an interactive dashboard.
- Implemented secure JWT-based authentication with bcrypt password hashing and protected frontend routes, ensuring safe access to user-specific financial data.
- Developed real-time analytics and visualization features using Recharts, including category-wise expense breakdowns, spending trends, and statistical insights for improved financial tracking.
- Tech Stack: React.js, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Mongoose, JWT, bcryptjs, Recharts, Axios, REST APIs, Vercel

### 🔗 Transition Backend | Ledger & Account Transfer System

🔗 Live Demo

- Built a secure backend ledger and account-transfer system using TypeScript, Express.js, PostgreSQL, and Prisma ORM, supporting user authentication, account management, and transaction processing.
- Implemented JWT-based authentication and logout token blacklisting, ensuring protected API access and secure session handling across all routes.
- Designed a ledger-based balance architecture where account balances are dynamically derived from CREDIT and DEBIT entries, with idempotency support to prevent duplicate transactions.
- Tech Stack: TypeScript, Node.js, Express.js, PostgreSQL, Prisma ORM, JWT, bcrypt, REST APIs, PostgreSQL, npm

## Skills

- **Programming Languages:** Javascript, Python, SQL
- **Front-End Development:** JavaScript (ES6+), React.js, HTML5, CSS3, Tailwind CSS, ShadCN UI.
- **Back-End Development:** Node.js, Express.js, RESTful APIs, Typescript, Asynchronous Programming
- **State Management:** Context API
- **Databases:** MongoDB, MySQL, PostgreSQL.
- **Version Control Tools:** Git, GitHub, Postman
- **Additional Technologies:** Chart.js, Streamlit, AWS (Basics), Snowflake, Talend.

## Education Qualification

### Eshan College of Engineering

B.Tech in Computer Science & Engineering, **GPA : 7.4/10**

### BBVM | CBSE

XII class (PCM)

2022 – 2026

UP, India

**2022**

UP, India
